

## A Comparative Feature Sheet And Product Guide

### ManagePro

### ManagePro Plus

### ManagePro Smart

### MProLite

#### Configuration & Features

**ManagePro Standard**  
For the Individual or local, shared group LAN installation

**ManagePro Plus**  
For the mobile worker or executive who needs 24/7 usage via a local copy of the db plus Web-based synchronization with the enterprise

**ManagePro Smart**  
For the extended or dispersed enterprise, using a thin client & Internet connection to remote db

**MProLite**  
Browser-based Lite version of ManagePro. Runs on PCs & Macs & interfaces with MPro Plus and Smart – not Standard

#### CONFIGURATION

Installation of the program

ManagePro installation on the user's local computer drive is required. Connection to the internet is not required to access the database (unless accessing a WAN via VPN).

Program is installed on desktop. Connection to the internet is not required to access the database, however it is required to update or synchronize local copy of the db with the enterprise or web copy of the db.

A smart client version of the program is installed on the user's pc. Connection to the internet/intranet is required to access db.

No program installation on the user's pc is required; however requires Chrome, IE7, Safari or Fire Fox as the operating browser. Connection to the internet is required to access the database.

MS SQL database installation and access. Microsoft SQL Express is installed by default, however user or user's organization may substitute Microsoft SQL 2005 as the preferred database

The database is either stored on user's local drive, or a LAN (Local Area Network) server if there is a shared database with other users.

Database is installed on local drive and a Web-server. Synchronization between the local copy and the web server copy of the db requires MPro10 Link & ManagePro SQL db installation on a web-server (hosted by PST or user's org.). MPro10-Link is an ASP.NET service.

The ManagePro 10 SQL db is installed on a Windows 2003 Web Server, MPro7.net, an ASP.NET application hosted on the server to support the ManagePro Smart Client.

MProLite database hosted by PST.

Upgrades are provided?	Yes, requires admin rights/access to desktop to upgrade	Yes, requires admin rights/access to desktop to upgrade	Yes, requires admin rights/access to desktop to upgrade.	Yes - upgrades handled automatically via the web-server
Cost and Licensing requirements:	Cost - \$525/user Includes one year of automatic software updates. Starting year two, annual upgrades provided for \$95/user	Cost - \$1,045/user Includes one year of automatic software updates. Starting year two, annual upgrades and web hosting are provided by PST for a cost of \$360/user/year	Cost - \$35/month (upgrades automatically included) or \$525/user. Includes one year of automatic software updates. Starting year two, annual upgrades and hosting provided for \$360/user/year.*	Cost - \$20/month or \$255/user/year 1 as a hosted service and \$127/a year thereafter.
*ManagePro Plus and ManagePro Smart require PST's proprietary software (MPro7-Link) installed on a Windows 2003 web server. PST hosts that software, or provides the option for customer's to self host at their own site.				
<b>Bottom Line: Pro's, Con's and Targeted User</b>	<p><b>Pro's</b> - Full feature, speedy application, does not require web access</p> <p><b>Con's</b> - Requires access to LAN or WAN for shared information, and program updates are managed per each desktop</p> <p><b>Targeted User</b> - Single user or a team sharing a common workplace and LAN server</p>	<p><b>Pro's</b> - Full feature, speedy application, can operate locally (without web/any location) then switch to web access to share information with others via web synchronization. Can work in conjunction with ManagePro Smart.</p> <p><b>Con's</b> - Requires web-server setup and hosting by either PST or the user's organization.</p> <p><b>Targeted User</b> - Managers, executives and disbursed team members who need to access ManagePro, whether or not they are connected to</p>	<p><b>Pro's</b> - Full feature application, able to operate from Windows-based pc or Mac with Parallels. Minimal IT support required. Can be used in conjunction with ManagePro Plus or Lite.</p> <p><b>Con's</b> - Does not include a local database. Requires: Internet access for the user to access the db, no data is stored on the local user's pc.</p> <p><b>Targeted User</b> - Organizations looking for an internet based application requiring</p>	<p><b>Pro's</b> - Ease of use, easy to install, minimal IT support required, information is transmitted securely via https; database is the robust MS SQL. It can be used as a stand-alone web product hosted internally on the organization's intranet, or utilized an ASP application that is hosted by PST.</p> <p><b>Con's</b> - Provides the primary ManagePro feature set, but does not include Resource Allocation or the graphical map view. Requires Internet access.</p>

		the internet (e.g. outside of their office, while traveling, etc.)	minimal IT support. Organizations that are searching for an internet-based tool to extend to direct reports, vendors & consultants.	<b>Targeted User</b> – Organizations looking for an enterprise level web-based project and business management application that can easily be configured to work within a portal.
<b>FEATURES</b>
